Web 1.0 vs Web 2.0 vs Web 3.0

- Web 1.0 – linking documents
- Web 2.0 – linking people
- Web 3.0 – linking facts
The usual suspects:

- Blogger
- YouTube
- Facebook
- Myspace
- Twitter
- Del.icio.us
- Digg

How EPrints Might Support Copyright for Teaching Materials

In yesterday's posting I mentioned the notion of a copyright and teaching materials that incorporate images and content produced by other people. It's a very current topic for the teaching and learning community, and one that has been discussed extensively in the context of the EdSpace project.

So I thought I'd knock up some extra document metadata fields in order to record the identity of the copyright holder, a URL field to allow a reference to where the media had been sourced from, and another for the author to declare whether it was his/her own material, whether the rights had been bought, or permission obtained, whether the material is in the public domain, or whether the copyright status was 'uncleared' or 'unknown'.

To recap: this is in the context of a set of lecture notes that have incorporated third party pictures and images. The repository has "burst out" all these images from the slideshow and recorded them as (but related) documents, with their own metadata for cataloguing purposes.

Now that the metadata is recorded, this can be used as the basis for a workflow, so that the published status of the slides can be made contingent on the correct permissions being obtained for all the images. Or alternatively, in the case of problematic images, the repository can create a copyright free version of the slideshow by pixelating, graying out, or simply removing the original image. Or, the author will be allowed to deposit the slideshow into the repository, but the EPrints QA audit system can be used to provide warnings and reminders to get missing permissions.

To re-iterate, this is not about Open Access to self-authored, self-deposited research materials about Open Educational Resources, which may incorporate third party materials and which the authors may need to license...

Microsoft Office at #dev8D 12:31pm

I joined my colleagues Chris Gutteridge and Dave Tarrant (aka BitTarrant) at the JISC Developer Happiness (#dev8D) event in London this week. At least, I came to the tail end of the event after I had dispatched some JISC bids! It was a great time, with lots of food for thought.

7 Dumb Things We Do (And 8 Tricks To Keep Errors at Bay)
rd.com — We all know the expression "To err is human." And this is true enough. When something goes wrong, the cause is overwhelmingly attributable to human error. Once a human is blamed, the inquiry usually stops there. But it shouldn't ... not if we want to eliminate the mistake. More... (People)

The Basics of Web 2

• All these factors contribute to Web 2.0

• It’s really just Web 1.0, with some new emphases

• But there are some important Web 2.0 phenomena
