## QUESTION

(a) Let $(G, *)$ be a group. Carefully prove the following statement using only the axioms for a group, indicating which axiom you used at each stage of the argument: There is a unique element $h \in G$ such that $h * g=g$ for every element $g \in G$.
(b) State Lagrange's Theorem and use it to prove that if $p$ and $q$ are prime and $G$ is a group of order $p q$ then every proper subgroup $G$ is cyclic. (A proper subgroup is one not equal to $G$.)
(c) Write out the Cayley table for the group of symmetries of an equilateral triangle using the notation $s$ to represent the anticlockwise rotation through $\pi / 3$ and $x, y, z$ to denote the three reflections in the lines $X, Y, Z$ as marked in figure 1 .

Figure 1
(d) For each of the statements below either show it is true OR give an example to show that it is false:
(i) If $g$ and $h$ are elements of a group and both have order $n$ then their product also has order $n$.
(ii) If every proper subgroup of a group $G$ is cyclic then so is $G$.
(iii) Every group of order 8 contains a cyclic subgroup of order 4 .

## ANSWER

(a) By the identity axiom there is an element $e \in G$ such that $e * g=g \forall g \in$ $G$. Now suppose $h \in G$ and $h * g=g \forall g \in G$. In particular $h * h=h$.
By the inverse axiom there is an element $h^{-1} \in G$ such that $h^{-1} * h=e$ so $h^{-1} *(h * h)=h^{-1} * h=e$.
By associativity $\left(h^{-1} * h\right) * h=h^{-1} *(h * h)$ so $e * h=\left(h^{-1} * h\right) * h=$ $h^{-1} *(h * h)=e$ or $h=e$.
(b) Lagrange's Theorem

If $G$ is a finite group and $H$ is a subgroup of $G$ then $|H|$ divides $|G|$.
If $|G|=p q$ with $p, q$ prime then any proper subgroup $h<G$ has $|H|=1, p$ or $q$.
Since $p, q$ are prime $H$ is cyclic.
(c)

| $\circ$ | $e$ | $s$ | $s^{2}$ | $x$ | $y$ | $z$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $e$ | $e$ | $s$ | $s^{2}$ | $x$ | $y$ | $z$ |
| $s$ | $s$ | $s^{2}$ | $e$ | $y$ | $z$ | $x$ |
| $s^{2}$ | $s^{2}$ | $e$ | $s$ | $z$ | $x$ | $y$ |
| $x$ | $x$ | $z$ | $y$ | $e$ | $s^{2}$ | $s$ |
| $y$ | $y$ | $x$ | $z$ | $s$ | $e$ | $s^{2}$ |
| $z$ | $z$ | $y$ | $x$ | $s^{2}$ | $s$ | $e$ |

OR

| $\circ$ | $e$ | $s$ | $s^{2}$ | $x$ | $y$ | $z$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $e$ | $e$ | $s$ | $s^{2}$ | $x$ | $y$ | $z$ |
| $s$ | $s$ | $s^{2}$ | $e$ | $z$ | $x$ | $y$ |
| $s^{2}$ | $s^{2}$ | $e$ | $s$ | $y$ | $z$ | $x$ |
| $x$ | $x$ | $z$ | $y$ | $e$ | $s$ | $s^{2}$ |
| $y$ | $y$ | $z$ | $x$ | $s^{2}$ | $e$ | $s$ |
| $z$ | $z$ | $x$ | $y$ | $s$ | $s^{2}$ | $e$ |

(d) (i) False, $x, y \in D_{3}$ above have order $2, x y=s^{2}$ has order 3 .
(ii) False, Every proper subgroup of $D_{3}$ is cyclic but $D_{3}$ is not.
(iii) False $C_{2} \times C_{2} \times C_{2}$
