

**Question**

The random pair  $X$  and  $Y$  has the distribution

|     |   | $y$            |               |               | Total |
|-----|---|----------------|---------------|---------------|-------|
|     |   | 2              | 3             | 4             |       |
| $x$ | 1 | $\frac{1}{12}$ | $\frac{1}{6}$ | 0             | —     |
|     | 2 | $\frac{1}{6}$  | 0             | $\frac{1}{3}$ | —     |
|     | 3 | $\frac{1}{12}$ | $\frac{1}{6}$ | 0             | —     |
|     |   | —              | —             | —             | 1     |

- (a) Are  $X$  and  $Y$  independent? Give reasons.  
 (b) Find the conditional pmf of  $Y$  given that  $X = 2$ .  
 Hence find  $E(Y|X = 2)$ .

**Answer**

The probability table is

|     |   | $y$            |               |               | Total         |
|-----|---|----------------|---------------|---------------|---------------|
|     |   | 2              | 3             | 4             |               |
| $x$ | 1 | $\frac{1}{12}$ | $\frac{1}{6}$ | 0             | $\frac{1}{4}$ |
|     | 2 | $\frac{1}{6}$  | 0             | $\frac{1}{3}$ | $\frac{1}{2}$ |
|     | 3 | $\frac{1}{12}$ | $\frac{1}{6}$ | 0             | $\frac{1}{4}$ |
|     |   | $\frac{1}{3}$  | $\frac{1}{3}$ | $\frac{1}{3}$ | 1             |

- (a) Since  $P(X = 1, Y = 4) \neq P(X = 1) \cdot P(Y = 4)$  ( $0 \neq \frac{1}{4} \cdot \frac{1}{3}$ )  
 $X$  and  $Y$  are dependent.  
 (b) The conditional distribution of  $Y|X = 2$  is

| $y$ | $f(y X = 2)$                                 |
|-----|--|
| 2   | $\frac{1}{6} \div \frac{1}{2} = \frac{1}{3}$ |
| 3   | $0 \div \frac{1}{3} = 0$                     |
| 4   | $\frac{1}{3} \div \frac{1}{2} = \frac{2}{3}$ |

$$E(Y|X = 2) = 2 \cdot \frac{1}{3} + 3 \cdot 0 + 4 \cdot \frac{2}{3} = \frac{10}{3}.$$
