

QUESTION

Find a solution of $x^2 + 1 \equiv 0 \pmod{17}$.

ANSWER

The alert will spot ± 4 as roots immediately! if you didn't notice, then as $17 \equiv 1 \pmod{4}$, we can appeal to the method of th.4.6 to deduce that the roots are $\pm \left(\frac{p-1}{2}\right)!$ where $p = 17$. Thus the roots are $\pm(8!) \pmod{17}$.

$8! = 8 \cdot 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 = 56 \cdot 30 \cdot 24 \equiv 5 \cdot (-4) \cdot 7 \equiv 5 \cdot (-28) \equiv 5 \cdot 6 \equiv 30 \equiv -4 \pmod{17}$, showing that the roots are $\pm 4 \pmod{17}$, as spotted!
