## Question

Prove that if a matrix $A$ and its inverse both have all their elements integers, then $\operatorname{det} A= \pm 1$

## Answer

If $A$ has all its entries integers then $\operatorname{det} A$ is an integer.
Ditto for $\operatorname{det} A^{-1} 1=\operatorname{det} A \cdot A^{-1}=\operatorname{det} A \operatorname{det} A^{-1}$
therefore $\operatorname{det} A=\operatorname{det} A^{-1}= \pm 1$
